

Field Testing Protocol

Great Plains Regional Supplement

Organization of field testing teams:

District Offices of the Corps of Engineers in the Great Plains Region (see the list of District coordinators at the end of this document) will coordinate and oversee the field testing of the draft Great Plains Regional Supplement to the Corps of Engineers Wetland Delineation Manual. Field testing will be done in cooperation with regional NRCS, EPA, FWS, and other interested federal and state agencies and universities.

Field teams will consist of available interagency wetland-delineation experts, with the constraint that each team must include an experienced botanist and a soil scientist to ensure the accuracy and reliability of the basic data.

If needed, the District coordinator will provide team members with an introduction to the Regional Supplement and will explain any new or unfamiliar indicators as necessary to avoid confusion over interpretation of the indicators.

Site Selection:

Testing teams should focus on areas where permitting activity is high. There is no need to sample remote areas unless convenient opportunities arise.

Sample a number of “typical” wetland sites in each District or subregion, plus a selection of available “problem” situations. Problem situations should include, if possible, areas with unusual plant communities or soil types that may lack indicators, requiring use of Chapter 5 (Difficult Wetland Situations in the Great Plains) to make the wetland determination.

Approach:

The basic testing approach is to document at least 2 sampling points at each field site, one point in the wetland and one point in the adjacent upland, and determine the location of the wetland boundary between them. The team should collaborate to make the determination and documentation as accurate as possible. Follow these general steps:

1. Document each sampling point based on existing practice (i.e., 1987 Manual *with existing guidance memos and existing local interpretation*). For each point, completely fill out the old (1992) wetland determination data form. Locate the wetland boundary based on current practice.

2. Document each point using the new (Regional Supplement) data form. Locate the wetland boundary based on indicators and guidance given in the Regional Supplement.
3. If the two wetland boundaries are different, measure the distance between them.
4. Fill out the attached questionnaire (one copy per field site) to help explain any differences seen in the two methods.
5. For each field site sampled, submit the following items to the appropriate District coordinator:
 - a. Completed 1992 and Regional Supplement data forms for each sampling point
 - b. Sketch map of the site with sampling points, wetland boundaries, and any other important features indicated
 - c. One copy of the Field Evaluation Questionnaire
 - d. Optional brief report as necessary to explain test results

List of Great Plains Corps District coordinators:

Andrew Commer, Tulsa District, 918-669-7616

Steven Eggers, St. Paul District, 651-290-5371

Mark Frazier, Kansas City District, 816-389-3664

Michael Gilbert, Omaha District, 402-221-3057

David Madden, Fort Worth District, 817-886-1741

Van Truan, Albuquerque District, Pueblo Regulatory Office, 719-543-6915

John Wong, Galveston District, Corpus Christie, 361-814-5847 Ext 126
